

**Amendments To Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

**1. (Currently Amended)** A surgical holder comprising a grasping member for grasping a tubular tissue, a manipulation member for manipulating the grasping member, and a connection portion with one end connected to the manipulation member, wherein:

the grasping member includes a first grasping plate, and a second grasping plate provided so as to oppose the first grasping plate in a movable manner so that they are able to become closer to each other or more distanced from each other;

the first grasping plate includes a retaining portion having an opening which is opened toward an outer side of the first grasping plate and a supporting portion having a recessed portion, the opening being provided in one end of the first grasping plate and the recessed portion being provided in the other end of the first grasping plate,

the first grasping plate includes an edge portion which has elongated end portion and defines the shape of the opening, the end portion of the edge portion being adapted to be inserted into a tube of the tubular tissue for grasping the tubular tissue,

the second grasping plate includes a covering portion formed so as to cover an entire surface or a part of the opening of the first grasping plate, a non-covering portion which does not cover the first grasping plate, and a fixing portion having a curved portion, the covering portion being provided in one end of the second grasping plate and the curved portion being provided in the other end of the second grasping plate,

the curved portion opposing the recessed portion to form [[the]]a tissue grasping space for grasping the tubular tissue when the first grasping plate and the second grasping plate are positioned so as to oppose one another,

a first grasping portion which can grasp a part of [[a]]the tubular tissue between the retaining portion of the first grasping plate and the covering portion of the second grasping plate are provided in one end portion of the grasping member, and the opening exposing another part of the tissue when a part of [[a]]the tubular tissue is grasped by the first grasping portion; and

a second grasping portion which can form [[a]]the tissue grasping space for the tubular tissue between the recessed portion of the first grasping plate and the curved portion of the second grasping plate is provided in another end portion of the grasping member.
